

Our Vision:

"Information Technology* becomes a positive tool for the advancement of Human Intelligence (HI), the Development of Sustainable Goals and the Evolution of Human Consciousness."

(* IT- BIG Tech companies, the internet, devices, IT communications and programming)

Our Mission:

To create a paradigm shift in the Information Technology industry by informing and empowering individuals to choose, and use technology, securely and consciously.

Our Goal for 2024-2025:

To support the creation of over 1000 Tech SAFE Tortoises: humans following the 5 C's of Cyber Security!

We Value:

Human Sovereignty, Human Connection and Conscious, Ethical Human Co-creativity.

We Believe:

- i** Technology is a powerful tool that could be used for the good of all humanity, not for profits for the few.
- i** The future of humanity lies within the personal well-being, the biotechnology of each of us, not within Artificial Intelligence (AI).
- i** Developing human connection, compassion and empathy, is more than 2D. It doesn't happen via screens, cables or satellites and needs human interfaces.
- i** Families need real connection, real hugs and real shared experiences to create a loving foundation for all other relationships.
- i** Children need play, wonder, nature and human contact to develop and thrive.
- i** Mother nature is the most powerful super-computer and AI will never match her beauty, intelligence or consciousness.
- i** Practise what we preach. We embrace the 5 C's within our family and business.
